What is claimed is:

- A process for preparing polysulfides, comprising reacting sodium sulfide with oxygen in the presence of a transition metal oxide, with the concentration of the catalyst ranging from 0.05 to 6.5 g/l, where the consumption rate of O_2 is at least 1.5×10^{-4} moles/l/sec, such that a selectivity of polysulfides greater than 65% is achieved.
- The process of claim 1, wherein the consumption rate of O_2 is at least $2x10^{-4}$ moles/l/sec.
- The process of claim 1', wherein the consumption rate of O_2 is at least $4x10^{-4}$ moles/1/sec.
- 4. The process of claim 1, wherein the reaction is conducted in a self-recirculated reactor.
 - 5. The process of claim 4, wherein the reactor is a hollow shaft reactor.
 - 76. The process of claim 1, wherein the transition metal oxide is MnO₂.
- The process of claim 1, wherein the consumption rate of oxygen is controlled through the control of the partial pressure of oxygen in the reaction.
 - The process of claim 4, wherein the consumption rate of oxygen is controlled through the control of the partial pressure of oxygen in the reaction.
- 9. The process of claim 1, wherein the temperature at which the reaction is conducted is in the range of from about 70 to 99°C.

- The process of claim 9, wherein the temperature is in a range of from about 75 to 85°C.
- The process of claim 9, wherein the temperature is in the range of from about 75 to 80°C.
- The process of claim 4, wherein the retention time in the reactor range is from about 2 to 15 minutes.
 - 13. The process of claim 12, wherein the retention time ranges from about 3 to 10 minutes.
- 14. The process of claim 12, wherein the retention time ranges from about 3 to 5 minutes.
 - 15. The process of claim 4, wherein the oxygen consumption is greater than $4x10^4$ moles/l/sec.
 - 16. The process of claim 1, wherein the selectivity is greater than 75%.
 - 17. The process of claim 1, wherein the selectivity is greater than 90%.
 - 18. A process for preparing polysulfides, comprising reacting Na_2S with oxygen in the presence of a transition metal oxide, with a concentration of the metal oxide ranging from 0.05 to 6.5 g/l, and where the consumption rate of O_2 is sufficient and the partial pressure of oxygen is controlled to achieve a selectivity of polysulfides greater than at least 85%.

- 19. The process of claim 18, wherein the selectivity of polysulfides achieved is greater than at least 90%.
- 20. The process of claim 18, wherein the reaction is conducted in a self-recirculated reactor.
- 5 21. The process of claim 18, wherein the reaction is conducted in a hollow shaft self-recirculated reactor.
 - 22. The process of claim 18, wherein the transition metal oxide is MnO₂.
